All proceeds support stewardship and educational projects in High Park.

"I'm trying to write a book review, but what I keep coming up with is a love letter...an interesting and easy-to-use interpretive field guide... also an inspiring and informative *stewardship* story too!" – www.nativeplantgirl.blogspot.com

"This tight jewel of a book has set a new bar for me when it comes to natural area and stewardship guides in general." – www.nativeplantgirl.blogspot.com

"The guidebook provides useful information on 26 rare savannah plant species, including such interesting facts as the plant's medicinal uses, personality and hidden talents! Drawing on native traditions, the guidebook identifies those plants that are edible and their nutritional elements. The plants in High Park are not to be picked for consumption, but this information is useful to those who wish to identify and make use of the wild plants in their own environments." – *The Insider*

"a gorgeous, informative and unique guide to the endangered Black Oak Savannah ecosystem of High Park." – *Carolinian Canada*

"This 64 page, full-colour guide includes a wonderfully thorough cultural and ecological history of High Park, an overview of the Volunteer Stewardship Program, and a thoughtful examination of a multitude of challenges and opportunities encountered during the restoration of this rare habitat." – *Carolinian Canada*

"This guidebook is truly a gem - with an elegant presentation and seamless integration of information, it is highly recommended for local and non-local native plant lovers, stewards, and even people looking to create their own environmental stewardship and natural area education guides." – *Carolinian Canada*

"This pocket-size book contains a wealth of information about High Park's Black Oak Savannah – its history, its designation as an Area of Natural and Scientific Interest (ANSI), and the goals, challenges and accomplishments of the VSP as they strive to preserve and restore the savannah's rare plants. Twenty-six of these plants, including trees, wildflowers and grasses, are described in detail. The light-hearted writing style, combining factual information with humorous asides, makes for easy reading." – *Toronto Field Naturalists Newsletter*

" Plant habits, preferences, companions, uses, and personality are fun to know... Schmidt gives this information in her discussion of twenty-six flowers, shrubs, and trees in the High Park savannah. She knows her plants well, and her style is witty, readable, and offbeat." – *Ann Birch, Editor, writer, High Park enthusiast*
